1. INTRODUCTION

This report summarizes findings from the Arkansas Prevention Needs Assessment Survey (APNA), a survey of 6th, 8th, 10th and 12th grade school students, conducted in fall 2023. This survey was available free of charge to all Arkansas public school districts that chose to participate. The survey was designed to assess adolescent substance use and related behaviors, and risk and protective factors that predict these behaviors. In this report, the results are presented for each grade along with the overall results for the State. Table 1.1 provides information on the total number of students and the number of students in the county. Table 1.2 provides information on the number and percent of students at each grade. Table 1.3 provides information on the number and percent of students by sex. Table 1.4 provides information on the number and percent of students by ethnic origin.

The APNA Survey was first administered in fall 2002 and has been administered in the fall of each school year since then. Because trends over time are very important to prevention planning, readers are encouraged to review the results from the previous surveys. By comparing the results of the previous surveys, changes in alcohol, tobacco and other drugs (ATOD) use, rates of antisocial behavior (ASB), and levels of risk and protective factors can be determined for a specific grade. Together, the results of the current and past APNA surveys provide a complete picture of ATOD use, antisocial behavior, and risk and protective factors for students in Arkansas.

1.1 The Risk and Protective Factor Model of Prevention

Arkansas uses the Risk and Protective Framework to guide prevention efforts aimed at reducing youth problem behaviors. This framework, developed by J. David Hawkins, PhD, Richard F. Catalano, PhD, and their colleagues at the University of Washington, Social Development Research Group, explains the relationship between risk and protective factors and youth problem behaviors. A total of 15 risk factors and 2 protective factors from this framework were measured in the 2023 APNA survey.

Risk and protective factor-focused prevention is based on a simple premise: To prevent a problem from happening, we need to identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. Just as medical researchers have found risk factors for heart attacks such as diets high in fats, lack of exercise, and smoking, a team of researchers, the Social Development Research Group (SDRG), at the University of Washington, have defined a set of risk factors for drug abuse. The research team also found that some children exposed to multiple risk factors manage to avoid behavior problems later even though they were exposed to the same risks as children who exhibited behavior problems. Based on research, they identified protective factors and processes that work together to buffer children from the effects of high risk exposure and lead to the development of healthy behaviors.

Risk factors include characteristics of school, community, and family environments, as well as characteristics of students and their peer groups that are known to predict increased likelihood of drug use, delinquency, and violent behaviors among youth¹.

1.2 The COVID-19 Pandemic Impact on the APNA Survey

In fall 2023, schools and districts across Arkansas and the United States returned to in-person classroom instruction. However, the impact of COVID-19 on the teaching environment as well as the health and mental health of students continues to be assessed for short- and long-term academic achievement and developmental growth. Statewide survey participation rates continued to be lower than pre-pandemic survey years, survey participation for this current year (2023) decreased compared with 2022 resulting in 9.6% less valid surveys (47,695 vs 52,777, respectively).

As you read and make use of the data in this report, please keep in mind the following guidelines for comparing multi-year data. The COVID-19 pandemic influenced data collection and, more importantly, student behaviors during the 2020, 2021 and 2022 reporting periods.

1. Comparisons between 2023 and previous years should be assessed with caution; for counties with low levels of responses, the results can be interpreted as trends that can be verified with future data.
2. The specific participating schools in each county are often different between years; comparisons between annual data should consider this differential.
3. For most counties, the data remain reliable and representative of general substance use and other behaviors of the students in your county.

For the 2023 APNA, these items on student perspectives were removed: safety for returning to school during the pandemic; preference for online vs. learning in school; remote access to school services; relationships and homelife during the pandemic; social distancing practices; and feelings of depression during the pandemic.

2. HOW TO READ THE CHARTS AND TABLES

1. Student responses for risk and protective factors, substance use and antisocial behavior questions are displayed by grade on the following pages.
2. Risk and Protective factors are grouped into 4 domains: community, family, school, and peer-individual.
3. Vertical bars represent the percent of students in the grade who reported elevated risk or protection, substance use, antisocial behaviors or school safety concerns.
4. Scanning across these charts, you can easily determine which factors are most (or least) prevalent, thus identifying which are the most important for your community to address.
5. The charts show 2 bars for each data point representing 2 years of data with the most current year in red on the right and the previous year in blue to the left. Those bars will be complemented by a small dash. The dash shows the comparison from the state and provides additional information for you in determining the relative importance of each risk or protective factor.
6. A dashed line on each risk and protective factor chart represents the percentage of youth at risk or with protection for the seven state sample upon which the cut-points were developed. The seven states included in the norm group were Colorado, Illinois, Kansas, Maine, Oregon, Utah and Washington.
7. Brief definitions of the risk and protective factors can be found following the graphs.
8. The tables provide more detailed information and are broken down by grade level. The combined category consists of all the grade levels represented in this report combined together (ie. if the report is based on 10th and 12th graders then the combined category will be all the 10th and 12th graders combined). For the tables on substance use, some substances also have a comparison to the Monitoring the Future (MTF) data. Monitoring the Future is an annual federally funded national survey of substance use across the country for students in grade 8, 10 and 12. For some substances and for some years or some grades, there is no corresponding MTF data. More information can be found at <https://www.drugabuse.gov/drug-topics/trends-statistics/monitoring-future>
9. The following abbreviations are sometimes used in the tables and charts due to space constraints:

ATOD stands for Alcohol, Tobacco and Other Drug Use.

ASB stands for Antisocial Behaviors.

PSI stands for Prosocial Involvement.

MTF stands for Monitoring the Future.

Substances and Prevalence Periods Measured by APNA

Arkansas youth reported on use of 16 ATOD substances: alcohol, cigarettes, smokeless tobacco, any vaping, marijuana, inhalants, hallucinogens, cocaine, methamphetamine, ecstasy, steroids, opiates/heroin, prescription drugs, over-the-counter drugs, alcopops, and CBD products. This report carries multi-year trend data, comparing this year's survey findings to up to four previous years of data gathered using similar survey questions.

A few substances have been added and removed throughout the years to reflect current usage trends. In 2012, synthetic marijuana (later removed in 2021) and bath salts (later removed in 2023) were added; e-cigarettes were added in 2014; steroids and vaping products were added in 2020; and CBD products were added in 2021. In 2023, wording for 30-day and lifetime use surrounding "heroin and other opiates" was updated to "used heroin or other illicitly manufactured opioids including fentanyl."

Data on lifetime vs. past 30-day substance use is also included in this report. Lifetime use (ever used), when students report having used a substance at least once, is typically viewed as a measure of youth experimentation of ATOD. In contrast, past 30-day use, when students report that they have used a substance at least once in the past 30 days, is viewed as the best measure of ongoing or current use of ATOD. For alcohol use, binge drinking is measured using a two-week prevalence period. Vaping product use is reported by frequency and amount used.

Table 2.1: Risk and Protective Factor Scale Definition

Community Domain Risk Factors	
Transitions and Mobility	Research has shown that transitions from school to school may be accompanied by significant increases in rates of drug use, school dropout and antisocial behavior.
Perceived Availability of Drugs	The availability of cigarettes, alcohol, marijuana, and other illegal drugs has been related to the use of these substances by adolescents.
Perceived Availability of Handguns	The availability of handguns has also been related to the use of these substances by adolescents.
Family Domain Risk Factors	
Poor Family Management	Parents' use of inconsistent and/or unusually harsh or severe punishment with their children places them at higher risk for substance use and other problem behaviors. Also, parents' failure to provide clear expectations and to monitor their children's behavior makes it more likely that they will engage in drug abuse whether or not there are family drug problems.
Family History of Antisocial Behavior	When children are raised in a family with a history of problem behaviors (e.g., violence or ATOD use), the children are more likely to engage in these behaviors.
Parental Attitudes Favorable Toward Drug Use	In families where parents use illegal drugs, are heavy users of alcohol, or are tolerant of children's use, children are more likely to become drug abusers during adolescence. The risk is further increased if parents involve children in their own drug (or alcohol) using behavior, for example, asking the child to light the parent's cigarette or get the parent a beer from the refrigerator.
Parental Attitudes Favorable Toward Antisocial Behavior	In families where parents are tolerant of their child's antisocial behavior (i.e. fighting, stealing, defacing property, etc.), children are more likely to become drug abusers during adolescence.
School Domain Risk Factors	
Poor Academic Performance	Beginning in the late elementary grades (grades 4-6) academic failure increases the risk of both drug abuse and delinquency. It appears that the experience of failure itself, for whatever reasons, increases the risk of problem behaviors.
Low School Commitment	Surveys of high school seniors have shown that the use of hallucinogens, cocaine, heroin, stimulants, and sedatives or non-medically prescribed tranquilizers is significantly lower among students who expect to attend college than among those who do not. Factors such as liking school, spending time on homework, and perceiving the coursework as relevant are also negatively related to drug use.

continued on the next column

Risk and Protective Factor Scale Definition (continued)

School Domain Protective Factors	
Opportunities for Prosocial Involvement	When young people are given more opportunities to participate meaningfully in important activities at school, they are less likely to engage in drug use and other problem behaviors.
Rewards for Prosocial Involvement	When young people are recognized and rewarded for their contributions at school, they are less likely to be involved in substance use and other problem behaviors.
Individual/Peer Risk Factors	
Early Initiation of Drug Use	Early onset of drug use predicts misuse of drugs. The earlier the onset of any drug use, the greater the involvement in other drug use and the greater frequency of use. Onset of drug use prior to the age of 15 is a consistent predictor of drug abuse, and a later age of onset of drug use has been shown to predict lower drug involvement and a greater probability of discontinuation of use.
Early Initiation of Antisocial Behavior	Early onset of antisocial behaviors such as being suspended from school, arrests, carrying handguns, fighting, etc. makes young people more likely to be involved in substance abuse.
Attitudes Favorable Toward ATOD Use	During the elementary school years, most children express anti-drug, anti-crime, and pro-social attitudes and have difficulty imagining why people use drugs. However, in middle school, as more youth are exposed to others who use drugs, their attitudes often shift toward greater acceptance of these behaviors. Youth who express positive attitudes toward drug use are more likely to engage in a variety of problem behaviors, including drug use.
Favorable Attitudes Toward Antisocial Behavior	During the elementary school years, most children express anti-drug, anti-crime, and pro-social attitudes and have difficulty imagining why people engage in antisocial behaviors. However, in middle school, as more youth are exposed to others who engage in antisocial behavior, their attitudes often shift toward greater acceptance of these behaviors. Youth who express positive attitudes toward antisocial behavior are more likely to engage in a variety of problem behaviors, including antisocial behavior.
Low Perceived Risks of Drug Use	Young people who do not perceive drug use to be risky are far more likely to engage in drug use.
Peer Rewards for Antisocial Behavior	Young people who receive rewards for their antisocial behavior are at higher risk for engaging further in antisocial behavior and substance use.

4. AGE OF INITIATION

The Age of Initiation Profile looks specifically at student responses to the questions *"How old were you when you first ..."*. The questions cover both first incidences of drug use (marijuana, cigarettes, alcohol, and regular use of alcohol) and first incidences of antisocial behaviors (suspension, arrest, carrying a gun, attacking someone and belonging to a gang). Possible responses to these questions range from age 10 to age 17 or the student can respond to the question with *"Never"*. The average age figures are based only on those students who responded to the question with an answer other than *"Never"*.

5. STUDENT TOBACCO USE, EXPERIENCES AND PREVENTION SERVICES

Tobacco use is the leading preventable cause of death in the United States.

Arkansas youth typically have higher rates of tobacco use, including both cigarettes and smokeless tobacco, than the national average. Higher tobacco prevalence rates are common across the southeastern United States. This is due to a variety of cultural and economic factors that have traditionally supported greater tobacco use. The following table shows the results of the lifetime and past 30 day use of cigarettes, chewing tobacco and vaping nicotine.

6. STUDENT ELECTRONIC VAPOR PRODUCT USE AND EXPERIENCES

Surveillance on the growing popularity of the use and effects of products linked to vaping is an important area of study for educators across the country. Electronic cigarettes and vaping products (such as vaporizers, vape pens, hookah pens, electronic pipes) began emerging throughout US communities in 2006-2007² and appeared in schools several years later.

In 2014, Arkansas introduced its first series of questions on lifetime use of e-cigarettes, e-cigars, and e-hookahs on the APNA questionnaire. At that time, students reported age of initiation at aged 14.5 years and e-cigarette use was reported by 18.7% of all students surveyed (Grades 8, 10, 12), with more than a third (37.3%) of 12th graders reporting use in 2014. By 2019, age of initiation of e-cigarette had declined to age 13.8 years; in addition, 24.7% of all students reported using e-cigarettes and, among 12th graders, 41.5% said they used e-cigarettes, e-cigars or e-hookahs.

For the 2020 APNA survey, the question, "used e-cigarettes, e-cigars or e-hookahs (vaping)" was modified to "used a vaping product like e-cigarettes, e-cigars, or e-hookahs" to capture the wider variety of products now available. In addition, new items have been added. Some vaping-related questions ask students about types of substances vaped: nicotine, marijuana, and flavoring; other questions ask about ease of getting substances and devices for vaping and reasons for vaping.

As shown for other questions on frequency of use, results from these questions are reported by grade level, total student responses, and total student responses compared with state levels of student use. With these results in hand, Arkansas' educators and administrators will be prepared to address what appears to be a rising tide of vaping among its students.

7. STUDENT MENTAL HEALTH

The 2023 APNA asked students six questions from the Kessler-6 (K6) model ³, which has been validated to assess these student feelings: sad, nervous, restless or fidgety, hopeless, everything is an effort, worthless ⁴. Students can respond to the questions using four response items ranging from "none of the time" to "all of the time." To calculate the scale reported herein, the six item responses were coded and summed to yield a number between zero and 24. The resulting scale has demonstrated excellent internal consistency and reliability (Cronbach's alpha = 0.89) ³ and the K6 has been shown to be a valid and reliable measure of mental distress among youth. ^{5 6}.

Results from these questions can provide a population-level assessment of the mental health of students. For example, findings can point to the percentage of students who may be at-risk for depression. In this report, student data are presented by grade for male / female responses. Three categories, low, middle, and high risk are shown to assist in quickly identifying areas of concern and need for programming.

8. CORE MEASURES OF THE DRUG-FREE COMMUNITIES PROGRAM

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which is typically referred to as the Core Measures of which there are currently four (30-Day Use, Perception of Risk, Parental Disapproval and Friends Disapproval). The drug categories measured are tobacco, alcohol, marijuana and prescription drugs. The first set of four tables found on the following page examines these measures broken down by grade level. The second set of four tables examines these measures broken down by gender. The meaning of the *pct* column will vary with each table and is described below. The *n* column represents the number of students who responded to the question (i.e. sample size).

Past 30-Day Use The question *"On how many occasions (if any) have you ... in the past 30 days?"* is used to measure this statistic by reporting the percentage of students who report any use in the past 30 days.

Perception of Risk The question *"How much do you think people risk harming themselves (physically or in other ways) if they ...?"* is used to measure this statistic by reporting the percentage of students who report that using the drug is a *"Moderate Risk"* or a *"Great Risk"* to their health.

Perception of Parental Disapproval The question *"How wrong do your parents feel it would be for you to ...?"* is used to measure this statistic by reporting the percentage of students who report that parents would feel it is *"Wrong"* or *"Very Wrong"* to use tobacco, alcohol and marijuana.

Perception of Friends Disapproval The question *"How wrong do your friends feel it would be for you to ...?"* is used to measure this statistic by reporting the percentage of students who report that friends would feel it is *"Wrong"* or *"Very Wrong"* to use tobacco, alcohol and marijuana.

Arkansas Prevention Needs Assessment Student Survey

- Thank you for agreeing to participate in this survey. The purpose of this survey is to learn how students in our schools feel about their community, family, peers, and school. The survey also asks about health behaviors.
- The survey is completely voluntary and anonymous. DO NOT put your name on the questionnaire.**
- This is not a test, so there are no right or wrong answers. We would like you to work quickly so you can finish.
- All of the questions should be answered by completely filling in one of the answer spaces. If you do not find an answer that fits exactly, use the one that comes closest. If any question does not apply to you, or you are not sure what it means, just leave it blank. You can skip any question that you do not wish to answer.
- For questions that have the following answers: **NO! no yes YES!**
 Mark (the BIG) **YES!** if you think the statement is **DEFINITELY TRUE** for you.
 Mark (the little) **yes** if you think the statement is **MOSTLY TRUE** for you.
 Mark (the little) **no** if you think the statement is **MOSTLY NOT TRUE** for you.
 Mark (the BIG) **NO!** if you think the statement is **DEFINITELY NOT TRUE** for you.

Example: Chocolate is the best ice cream flavor.

☐ NO! ☐ no ☒ yes ☐ YES!

In the example above, that student marked "yes" because he or she thinks the statement is mostly true.

- Please mark only one answer for each question, unless otherwise directed, by completely filling in the oval with a #2 pencil.**

11. FREQUENCY DISTRIBUTION TABLES

This section contains frequency distribution tables for all questions found on the 2023 Arkansas Prevention Needs Assessment Survey (APNA) Survey. The tables appear in the same order as the questions on the survey. The tables include breakdowns by grade level as well as combined percentages. The *N of Valid* row is a frequency count of the number of valid responses to each question for each grade and overall. The *N of Miss* row is a frequency count of the number of invalid(marked more than one response) or missing (i.e. did not respond) responses to each question for each grade and overall.

For the questions that allowed more than one response (i.e. race, live with, etc.) each response becomes a separate table. If a student did not mark the response, that was counted as a NO response, if they did mark the response, that was counted as a YES response, and if none of the responses were selected each was set to missing.
